

LAB SESSION REPORT

Work done in Lab Session:

In this lab session I have learned about Containers, Padding, Margins, Row and Column widgets in flutter.

Containers: -

A container first surrounds the child with padding (inflated by any borders present in the decoration) and then applies additional constraints to the padded extent (incorporating the width and height as constraints, if either is non-null). The container is then surrounded by additional empty space described from the margin.

Row: - A widget that displays its children in a horizontal array.

Column: - A widget that displays its children in a vertical array.

Plans for next week:

- Will follow the course
